INNOVATION LABS2027

WORKING WITH AI

Better AI output starts with better context.

Context is everything the AI can work from besides your question: real material, the limits you work within, and your feedback.

Prompt wording can matter. A major practical gain often comes from what surrounds it.

Illustrative sketch, not measured results. The same AI and the same request, with a different starting point.

1

Real material

Bring what actually exists: interview notes, your pricing sheet, last month's numbers, the draft you already wrote.

2

Constraints and context

Tell the AI what it cannot see: your stage, budget, market and customers, and what you have already ruled out.

3

Correction and iteration

Treat the first answer as a draft. Point out what is wrong, add what is missing, and run it again.

ONE HABIT

Feed it real material, then question what comes back.

ASK IT BACK

- Which source is this based on?
- What did you assume or guess?
- What would change your answer?

TAKEAWAY

Give the AI more to work from. Then check what it gives you.

Illustrative capability-test artifact. A practical rule of thumb for working with AI, not a research finding.
